PLASTIC CLAMP FOR RG6 CABLE WITH NAIL – Technical Specifications

1 – Introduction

Plastic clamp developed for the firm fastening of RG6 coaxial cable, used in TV, video, and communication installations.

Designed to provide quick, safe, and organized cable mounting, it maintains its structural integrity even under prolonged sunlight exposure.

Manufactured in nylon with UV protection, available in white and black, with a treated metal nail for maximum durability.

2 – Description

Constructed from resistant nylon 66 with UV protection, it ensures dimensional stability and color retention under solar radiation.

The SAE 1070 tempered and annealed steel nail, with a zinc-plated finish, provides precise and firm penetration without deformation during installation.

Its ergonomic design allows the cable to be secured without damage, ensuring a neat and long-lasting installation both indoors and outdoors.

3 – Materials and Construction

| Component | Description |
|------------------|---|
| Body material | Nylon 66 with UV protection |
| Available colors | White and black |
| Nail material | SAE 1070 tempered and annealed steel |
| Finish | Zinc-plated and dehydrogenated, flat head |

4 – Technical Properties

| Property | Value |
|---------------|--------------|
| Nail length | 11 ± 0,5 mm |
| Nail diameter | 2 mm |
| Total height | 7 ± 0,5 mm |
| Width | Approx. 6 mm |

5 – General Characteristics

- Proven resistance to UV exposure.
- Burr-free edges.
- Quick and secure installation.
- Suitable for indoor and outdoor use.

6 – Packaging and Presentation

- Packaging: Sealed plastic bags of 100 units.
- External packaging: Corrugated cardboard box for transport and storage.
- Identification: Label with model, color, batch, quantity, and country of origin.
- Complies with current Argentine legislation for commercialization.
